The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them.

The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumour, rectal tumour or liver tumour, breast tumour, co profestate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TNF) alpha from human constitution the release of tumour necrosis factor (TNF) alpha from human conference of the stimulating the proliferation of conference of the stimulating the proliferation of or gene confissation probes, in chromosome and gene mapping, in generating canisation probes, in chromosome and gene mapping, in generating transgenic animals or knock-out animals which the technology, in generating transgenic animals or knock-out animals which can beed in the development and screening of therapeutically useful can be used in the development and screening of therapeutically useful cantibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, are useful for preparing a medicament for treating and indisorders (e.g. arthritis, sports injuries), involving inducing the re-differentiation of chondrocytes. The PRO polypeptides are useful as confident markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polyputode of the invention. 180 Novel isolated PRO polypeptide useful for tissue typing, as molecular weight markers in protein electrophoresis, for treating arthritis, tumor. New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy. New isolated nu PRO4978, useful

Fig 375; 637pp; English

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the invention also relates to an antibody which specifically binds to a PRO polypeptide, amethod for stimulating the prosliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for collon, breast, prostate, rectal, kidatey, cervical and liver tumours). The prolymucleotides are useful in molecular biology, including uses a hybridisation probes, in chromosome and gene mapping, in generating a chypridisation probes, in chromosome and gene mapping, in generating and in gene therapy. The polymucleotides may also be useful in the development and screening of therapeutically useful cagents. The PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are reagents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of animal encourage of the polypeptides are used in preparing collieration of sinner ear utricular supporting cells, for stimulating various bone and/or cartilage disorders such as sports injunities and various bone and/or cartilage disorders such as sports injunities and carting are are also useful for treating sports-related joint problems, articular cartilage are useful for treating sports-related joint problems. This may benefit from enhanced local immune system cells infiltration. Note: Thom Hopper are expressive to the sequence represents a human PRO polypeptide of the invention. Note: The mispon of the properior of the USPTO at segdata.uspto.gov/sequence.html. from

(I) is useful for stimulating the release of TMF-alpha from human blood, for modulating the uptake of glucose or FRA by skeletal muscle cells or adjocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of proteoglycans from cartilage, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the release of a cytokine from PBMC cells, for inhibiting the binding of the release of a cytokine from PBMC cells, for inhibiting the binding of eells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour. The oligonucleotide probes

are useful for isolating genomic and cDNA nucleotide sequences or antisense probes. (I) is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding interaction. A polynucleotide (II) encoding (I) is useful in chromosome and gene mapping, in generation of antisense RNA and DNA, in the preparation of PRO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and screening of therapeutically useful reagents, in gene therapy, for chromosome marker, and for generating probes. An anti-(I)-antibody is useful in diagnostic assays for PRO, e.g. detecting its expression in specific cells, issues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. (I) and (II) are useful for tissue typing. This sequence encodes a novel human secreted and transmembrane PRO polypeptide. 540 900 99 999 120 120 180 180 240 240 300 300 360 420 420 480 480 9 720 9 9 1 GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC 121 AAGAAAAAAATCATGAAAAACCATCCAGCCAAAAATGCACTCAATCTTGGGCAAT 181 CTTCACGGGGCTGGCTGCTCTGTGTCTTCCAAGGAGTGCCCGTGCCCAGGGAGATGC 241 CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGGAGAGCGCCACCTCAG GGTGCAGACAGACAACCAAAGACCTCTAGGGTCCACCTCATGTGCAAGTATCTCC 481 GGTGCAGACAGACAACCACCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC CTGCATAGCAACTGGTAGACCAGAGGCTTACGGTTACTTGGAGACACATCTCTCCCAAAGC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCCCCAAAGC GCTTGCTTTGTGAGGAGAGAGAATACTTGGAAATTCAGGGCATCACCCGGGAGCAGTC AGGGGACTACGAGTGCGTCCAATGACGTGGCCGCCCCGTGGTACGGAGAGTAAA 1 GITGIGICCTICAGCAAAACAGIGGAITIAAAICICCTIGCACAAGCIIGAGAGCAACAC AAGAAAAAAATCTCATGAAACCATCCAGCCAAAAATGGACAATTCTATCTTTGGGCAAT 181 CTTCACGGGGCTGGCTGCTCTGTGTCTTCCAAGGAGTGCCCGTGCGCAGCGGAGATGC 241 CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGAGAGCGCCCACCCTCAG 301 Grecacrarreacaacceeercacceeereecreecraaaccecaccaccarcra 361 TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCAAAC 361 IGCIGGGAAIGACAAGIGGIGGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACACCCAAAC CAAAATTGTAGAGATTTCTTCAGATATCTCCCATTAATGAAGGGAACAATATTAGCCTCAC <u> GGTTGGCTTTGTGAGTGAAGACGAATACTTGGAAATTCAGGGCATCACCCGGGAGCAGTC</u> 301 GIGCACIATIGACAACCGGGICACCCGGGIGGCCIGGCIAAACCGCAGCACCAICCICIA 421 GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTGTATGACGAGGGCCCTTACACCTGCTC . 0 100.0%; Score 1679; DB 1; Length 1679; 100.0%; Pred. solated PRO polypeptides useful as molecular weight markers in electrophoresis, and useful for tissue typing, for treating

Claim 2; Fig 125; 308pp; English.

```
The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypuclectides encoding them.
The PRO polypeptides and polymuclectides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, comparing the release of tumour or liver tumour) in a mammal, for stimulating the proliferation of defecting the release of tumour necrosis factor (TMF) alpha from human blood, for stimulating the proliferation of or gene conditions probes, in chromosome and gene mapping, in generating command the development and screening of therapeutically useful redunding the proliferation of or gene antisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals which reagents, in gene therapy and screening of therapeutically useful reagents, in gene therapy, in chromosome identification, as chromosome markers and in generating probes. The PRO polypeptides, or anti-PRO antibodies, such as perioyte associated tumours and bone and/or cartilage condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as perioyte associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as modecular markers for protein electrophoresis, and in tissue typing. This equence represents a human PRO polypuccide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 ARTCTATCAGGAAAGAAAGAAAAAAAACCGAACCTGACAAAAAAAGAAAAAAGAAG 120

                                                                                                                                        301
                                                                                                                                                                                                  361
```

The invention describes an isolated PRO (secreted and transmembrane)

CC polypeptide (1): PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are useful to useful for trimulating the pro116ration of or gene expression in periove cells. PRO357, PRO229, PRO1152 or PRO4405 polypeptide are useful cor trimulating the pro116ration of defondrocyte cells. PRO357, PRO229, PRO1152, PRO1306 or PRO4419 polypeptide are useful cells. PRO351, PRO952, PRO1155, PRO1306 or PRO4419 polypeptide are useful cells. PRO351, PRO952, PRO9525, PRO91306, PRO91306, PRO1307, PRO9131, PRO9

```
The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from bindating the release of tumour necrosis and consider that the release of tumour necrosis factor-alpha (TNF-alpha) from bindating the release of tumour necrosis of proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adream). Ind., or proliferation or differentiation of chondrocyte cells and a method for colls, breast, procedure rectal, kidney, cervical and liver tumours). The polymucleotides are useful in gene therapy. The polymucleotides may also a research from an in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapoutically useful cuseful in the development and screening of therapoutically useful cuseful in the development and screening of therapoutically useful cuseful in the development and screening of therapoutically useful cuseful in the development and screening of therapoutically useful cuseful in the development in condition responsive to the polypeptides or antibodies are used in preparing an endipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating cuseful for teating sports cells, for stimulating effects are useful for teating sports related joint problems, articular cartilage are useful for treating sports-related joint problems, articular cartilage are useful for treating such as sports-related disorders such as various thalassaemias and rhemmaton articular cartilage are also useful for treating various mammalian haemoglobin many parefit from enhanced local imm
                                                                                                                                                                                                             Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.

                                                                                                                                                                                                                                                                                         01-JUN-2001
                                                                                                                                                                                                                                  28-FEB-200
```

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis fector-alpha (TNF-alpha) from human blood, a method for stimulating the prosideration or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating captisants probes, in chromosome and gene mapping, in generating at the development and screening of the polymorleotides may also captisants. The Rew polypeptides by recombinant techniques and in the development and screening or knock-out animals which are useful in the development and screening or knock-out animals which are useful in the development and screening of the properties, such as tumours, for stimulating and inhibiting proliferation of multipoles, such as tumours, for stimulating and inhibiting proliferation of inner ear utribodies are used in preparing of figuration of anglocyte cells, for stimulating differantiation of inner ear utribular such as sports injuries and articular cartiage are useful for treating such as sports injuries and articular cartiage are useful for treating various mammalian hasmoglobin-associated disorders such as various thalassaemias and condition. This casociated disorders such as various thalassaemias and condition. This casociated disorders and manner system cell infiltration. This catcular cartiage are useful for treating various mammalian hasmoglobin-associated disorders such as various thalassaemias and condition. The sequence captesorte a unamn PRO polymoscide of the invention. Note: the sequence represents a unamn PRO purportide of the invention. This is the property of the in Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis. 120 120 180 9 9 1 GITGIGICCTICAGCAAAACAGIGGATITTAAATCTCCTIGCACAAGCTIGAAGAGCAACAC 1 dridigiccircaddaaadaddagriraaarcrectrocadaagcrreagagcaacac 121 AAGAAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTTGGGCAAT Gao W; Gaps Deforge L, Desnoyers L, Filvaroff E, Ga A, Godowski PJ, Gurney AL, Sherwood S; Tumas D, Watanabe CK, Wood WI, Zhang Z; 0; Query Match

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, certor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, certorial and liver tumours). The prolyincleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and BNA and in gene therapy. The polyuncleotides may also a present in the development and screening of kerzapurically useful antisense RNA and BNA and in gene therapy. The polyuncleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of kerzapurically properties or antibodies are used in preparing a medicament for traating a condition responsive to the polypeptides or antibodies are used in preparing of medicament for traating a condition responsive to the polypeptides or antibodies are used in preparing of stimulating differentiation of adipocyte cells, for modulating the uptake of glucose or FFA by skeletal muscle cells or adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating differentiation of finner ear utricular supporting cells or 1-lymphocyte cells for inducing endochenial cell to the relating various manalish problems, articular cartilage are useful for treating sports injuries and articular cartilage are useful for treating sports related disorders such as various manalism heamedle form cartilage are useful for treating sports related disorders such as various manamalian heamedle form ceptement a benefit from enhanced local im
                                                                                                                                                                                                                                                                                                                                                                                                                            Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gao W;

cartilage disorders, e.g. arthritis

SEQ ID NO 375; 636pp; English Claim 2; The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the crease of TNF-alpha from human blood, for modulating the uptake of glucose or FFA by skeletal muscle calls or adipocyte cells, for glucose or FFA by skeletal muscle calls or adipocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells, cells, for stimulating the proliferation of inner ear utricular supporting cells, cor stimulating the proliferation of inner ear utricular supporting cells, cor stimulating the proliferation of inner ear utricular supporting cells, for atmulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of adipocyte cells, for stimulating proliferation of adipocyte cells, for stimulating proliferation of adipocyte cells, for stimulating proliferation of adipocyte cells, cervical or liver tumour is lung, colon, breast, certal, cervical or liver tumour is lung, colon, breast, certal, cervical or liver tumour is lung, colon, breast, certal, cervical or liver tumour is lung, colon, breast, certal, cervical or liver tumour is lung, colon, breast, certal, cervical or liver tumour is lung, colon, breast, certal cervical or liver tumour. The oligomicled to probes are useful for isolating openomic and cDNA mucleotide (I) is also useful as therapeutic agent the consone marker, and for generating of therapeutically useful reagents, in gene therapy, for chromosome leftentification, as chromosome marker, and for generating of chromosome identification, as chromosome marker, and for generating of chromosome leftentification, as chromosome marker, and for generating of sources. An anti-(I) are useful in diagnostic assays for PRO, ergonoces, and transmendrane PRO polypeptide.

Baker KP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, Gao W; Gerritsen ME, Goddard A, Godowski PJ, Gurney AL, Sherwood S; Smith V, Stewart TA, Tumas D, Watanabe CK, Wood WI, Zhang Z;

WPI; 2003-900166/82. P-PSDB; ADE22249. Two hundred and seventy five nucleic acids encoding FRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone

cartilage disorders, e.g. arthritis. Claim 2; Fig 375; 638pp; English The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the prostation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adremal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in chromosome and gene mapping, in generating a thybridisation probes, in chromosome and gene mapping, in generating a streams who and nn gene therapy. The polynucleotides may also a traisense RNA and an gene therapy. The polynucleotides may also conserved in preparing PRO polypeptides by recombinant techniques and in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of the apprehense of the stumours, for stimulating and inhibiting proliferation of martibodies, such as tumours, for stimulating and inhibiting proliferation of manner are are useful or modulating the uptake of stimulating differantiation of adipocyte cells, for stimulating cells or T-lymphocyte cells, for stimulating cells or T-lymphocyte cells, for inducing endothelial cells in medical as sports injuries and articular cartilage are useful for treating articus and intended are useful for treating articus and intended are useful for treating sortes sequence date of sequence also useful for treating articus and intended are useful for treating articus and may benefit from enhanced local immune system cell infilteration. Note: The sequence date for this patent is also various articus of the invention: the useful for treating various memorals and may benefit at seque

LEE	New isolated, secreted and transmembrane PRO polypeptides and nucleic acids, useful for the diagnosis, prevention and/or treatment of tumors, such as lung, colon, breast, prostate, rectal, cervical and/or liver
ξX	
S X	Claim 2; Fig 375; 637pp; English.
88	The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynuclectides encoding them. The
ខ្លួ	invention also relates to an antibody which specifically binds to a PRO polymentide, a method for stimulating the release of tumour necrosis
ខ្លួ	factoralpha (TNF-alpha) from human blood, a method for stimulating the recipility of differentiation of chondrower calls and a method for
888	1
ខ្លួ	colon, breast, prostate, rectal, kinney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as
ខូខូ	hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polynucleotides may also
នូខ	be used in preparing PRO polypeptides by recombinant techniques and in

```
cc useful in the development and screening of therapeutically useful cagents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of thuman microvascular endothelial cells for modulating the uptake of glucose or FPA by skeletal muscle cells, for modulating the uptake of stimulating differentiation of adipocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of riner ear utricular supporting cells, for Typhocyte cells, for inducing endothelial cell tube formation and for treating cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and cartilage are useful for treating sports-related joint problems, arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobin-associated disorders such as various thalassaemias and conditions which may benefit from enhanned longer is also avainable in electronic format from the USPTO website at segdata. Use various of the invention. Note: The sequence data for this pacent is also available in electronic format from the USPTO website at segdata.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240

WPI; 2003-875641/81. P-PSDB; ADE35611.

New genes, and its encoded secreted and transmembrane polypeptides, useful for treating e.g. lung or breast tumors, osteoarthritis, rheumatoid arthritis, obesity, diabetes, hyperinsulinemia, hypoinsulinemia or wounds.

Claim 2; SEQ ID NO 522; 462pp; English.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% aniho acid sequence identity contransmembrane protein) having at least 80% aniho acid sequence declared signal in the specification (including PRO lacking its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising a manino acid sequence, and an anti-PRO polypeptide in a sample suspected (containing PRO4993 polypeptide). Similarly, PRO4993 polypeptide is useful for detecting a PRO4993 polypeptide is useful for detecting projypeptide, and PRO1559 polypeptide is useful for detecting projypeptide, and PRO1559 polypeptide is useful for inking a bloactive molecule to a cell expressing PRO337 polypeptide. The bioactive molecule to a cell expressing PRO337 polypeptide; useful for linking a bloactive molecule to a cell expressing PRO4993 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO4993 polypeptide or anti-PRO4993 polypeptide is useful for modulating the biological activity of the cell expressing PRO559 polypeptide; RRO700 or PRO739 polypeptide or anti-PRO4993 polypeptide or anti-PRO4993 polypeptide or anti-PRO4993 polypeptide is useful for modulating the biological activity of the cell expressing PRO599 polypeptide or anti-PRO4993 polyp

PRO739 polypeptide is useful for modulating the biological activity of the cell expressing PRO725, PRO700 or PRO739 polypeptide. The polypeptides are useful for inhibiting tumour growth, retinal disorders, sports-related joint problems, artititing actilised defects, osteoarthritis or rheumatoid arthritis, wound healing and hearing loss immammals. The present sequence encodes a PRO protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGCCCTTACACCTGCTC

New genes, and its encoded secreted and transmembrane polypeptides, useful for treating e.g. lung or breast tumors, osteoarthritis, rheumatoid arthritis, obesity, diabetes, hyperinsulinemia, hypoinsulinemia or wounds.

Claim 2; SEQ ID NO 522; 452pp; English

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal comprising a PRO secrecially a PRO secrecial with or without its associated signal peptide, a PRO extracellular domain with or without its associated signal comprising to peptide, a PRO extracellular domain with or chimacric molecule comprising proteins and producing PRO, a chimacric molecule comprising to mentioned above, a vector comprising PRO, a chimacric molecule comprising to the peptide is useful for detecting a PRO39 polypeptide is useful for detecting prolypeptide in a sample suspected of containing PRO4993 polypeptide is useful for detecting prolypeptide, PRO725, PRO700 or PRO739 polypeptide is useful for detecting a profession or PRO739, PRO4993 polypeptide is useful for detecting a profession procession or PRO739 polypeptide is useful for inking a bloactive molecule to a cell expressing PRO37 polypeptide; PRO337 polypeptide; SPRO337 polypeptide; PRO337 polypeptide; PRO337 polypeptide; PRO337 polypeptide; PRO337 polypeptide; SPRO337 polypeptide; PRO337 polypeptid

Sequence 1679 BP; 498 A; 432 C; 419 G; 330 T; 0 U; 0 Other;

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO stracellular domain with or without its associated signal peptide, a PRO stracellular domain with or without its associated signal peptide, a PRO stracellular domain with or without its associated signal peptide, a PRO stracellular domain with or chimacric cell comprising the vector and producing PRO, a chimacric molecule comprising the PRO proteins and anti-PRO fused to a heterologous amino acid sequence, and an anti-PRO included are molecule is useful for detecting PRO337 polypeptide is useful for detecting propyeptide. PRO725, PRO700 or PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide is useful for detecting PRO335 polypeptide is useful for district molecule to a cell expressing PRO337 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO493 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO493 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO493 polypeptide is useful for modulating at least one biological activity of the cell expressing PRO493 polypeptide is useful for modulating the biological activity of the cell expressing PRO493 polypeptide is useful for modulating the biological activity of the cell expressing PRO493 polypeptide or anti-PRO35, condulating the biological activity of the cell expressing PRO493 polypeptide or anti-PRO35, condulating the biological activity of the cell expressing PRO493 polypeptide or anti-PRO35, condulating the biological activity of the cell expressing PRO493 polypeptide or anti-PRO35, condulating the biolo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the polypeptide, a method for stimulating the polypeptide, amethod for stimulating the prostero-alpha (TMF-alpha) from human blood, a method for stimulating the prostero or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for consideration or differentiation of chondrocyte cells and a method for consideration probes, in chromosome and gene mapping in generating colon, breast, prostero, rectal, kidhey, cervical and liver tumours). The polymucleotides may also a netisense my proparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful useful in the development and screening of therapeutically useful useful in the development screening of therapeutically useful useful in the development of stimulating and inhibiting proliferation of medicament for treating a condition tesponsic and inhibiting proliferation of thuman microvascular endothelial cells, for modulating the uptake of glucose or FRA by skeletal muscle cells or medicament of inner an utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating treating the proliferation of inner ear utricular supporting cells or T-lymphocyte cells, for modulating differation of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injunities PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, articular cartilage are useful for treating sports indumented and trained considered from USPTO at segdata.uspto.gov/sequence.html Claim 2; Fig 375; 637pp; English

NO 375; 637pp; English. ü The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for confidence or detecting the presence of tumour in a mammal (e.g. adremal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The prolymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating articles preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful useful in the development and screening of therapeutically useful useful in the development and screening of therapeutically useful useful in the development screening of therapeutically useful useful in the properties are useful in responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of adipocyte cells, for stimulating proliferation of adipocyte cells, for stimulating proliferation of adipocyte cells, for stimulating various bone and/or cartilage disorders such as sports injurises and cells, for cartilage are useful for treating sports-related joint problems, articular cartilage are useful for treating sports-related joint problems, articular cartilage are useful for treating sports-related joint problems, articular cartilage are useful for treating sports related goint problems, articular cartilage are useful for treating various mammalian hasmoglobine may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polymucleotide of the invention. This recommended the patch of the patch of the patch of the patch of t from USPTO at segdata.uspto.gov/sequence.html.

Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.

SEQ ID NO 375; 636pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the prosideration of a tumour in a mammal (e.g. adremal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polyuncleotides are useful in molecular biology, including uses as colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polyuncleotides are useful in molecular biology, including uses and in thisense RNA and in gene therapy. The polyuncleotides may also constrained either transgenic animals or knock-out animals which are cuseful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful et proparing a tumours, for stimulating and inhibiting proliferation of human microvascular andothelial cells, for modulating the uptake of glucose or FRA by Releast muscle cells, for stimulating differantiation of adipocyte cells, for stimulating collication of or gene expression in pericyte cells, for stimulating collication of inner ear utricular supporting and inhibiting collication of or gene expression in pericyte cells, for stimulating collication of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating cortificates are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO plypeptides which stimulasseemias and conditions which massociated disorders such as various human earlied of propertions of companced local immune system cells the invention. Note: the sequence

(I) is useful for stimulating the release of TNP-alpha from human blood, for modulating the uptake of glucose or FPA by skelteral muscle cells or adipocyte cells, for stimulating the proliferation or differentiation of chondrocyte cells,

To stimulating the proliferation of of gene expression in partiage, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the binding of the release of a cytokine from PBMC cells, for inhibiting the binding of A-peptide to factor VIIA, for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, the presence of tumour in a mammal. The tumour is lung, colon, breast, corrival or liver tumour. The oligomort expenses or are useful for isolating genomic and cDNA nucleotide sequences or antisense probes. (I) is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding increation. A polymucleotide (II) encoding (I) is useful in chromosome and gene mapping, in generation of antisense RNA and DNA, in the corporation of therapeutically useful in the development and chromosome identification, as chromosome marker, and for generating of therapeutically useful in diagnostic assays for PRO, e.g. chromosome identification, as chromosome marker, and for generating of cromensome identification, as chromosome marker, and for generating cromesome activity purification of PRO from recombinant cell culture or natural cources. (I) and (II) are useful for tissue typing. This sequence encodes con a novel human secreted and transmembrane PRO polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     600

Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.

Claim 2; SEQ ID NO 375; 636pp; English.

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypepitides (I). (I) is useful for stimulating the release of TMF-alpha from human blood, for modulating the uptake of glucose or FRA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the release of proteoglycans from cartilage, for cells,

continulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the binding of the release of a cytokine from PBMC cells, for inhibiting the binding of A-peptide to factor VIIA, for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour. The oligonucleotide probes are useful for isolating genomic and cDNA nucleotide sequences or antisense probes. (I) is also useful as therapeutic agent. FNO is useful in assays to identify other proteins or molecules involved in binding interaction. A polymucleotide (II) encoding (I) is useful in chromosome contents of therapeutically useful in the development and preparation of FNO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and concenting of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating probes. An anti-(I)-antibody is useful in diagnostic assays for PNO, e.g. detecting its expression in specific cells, tissues or serum, and for affinity purification of PNO from recombinant cell culture or natural concess. (I) and (II) are useful for tissues typing. This sequence encodes a novel human secreted and transmembrane PNO polypeptide. 9 180 180 240 240 360 420 420 480 540 600 999 61 ARTCTATCAGGAAAGAAAGAAAGAAAAAAACCGAACCTGACAAAAAAAGAAAAAAGAAG 120 120 300 360 480 GGITGGCITIGIGAGIGAAGACGAATACTIGGAAAITCAGGGCAICACCCGGGAGCAGTC 720 60 9 301 GTGCACTAITGACAACGGGGTCACCGGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACCACATCTCCCCAAAGC Gricificational de la contrata del contrata del contrata de la contrata del contrata del contrata de la contrata del contrata del contrata de la contrata del contra AAGAAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTTTGGGCAAT 121 AAGAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTCTTGGGCAAT CTTCACGGGGCTGCTCTGTGTCTCTTCCAAGGAGTGCCCGTGCGCAGCGGAAGATGC 241 CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGGAGAGCGCCACCCTCAG GTGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCACCATCCTCTA TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCAAAC GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC 421 GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC GGTGCAGACAGACCACCCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC 481 GGTGCAGACAGACAACCACCCAAAGACCTCTAAGGGTCCACCTCATTGTGCAAGTATCTCC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGAACAATATTAGCCTCAC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACACATCTCCCCAAAGC 1 GITGIGICCTICAGCAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC CTTCACGGGGCTGCTCTGTGTCTCTTCCAAGGAGTGCCCGTGCGCAGCGGAGATGC Gaps ;; 0 Query Match

New PRO nucleic acid, useful for manufacturing a medicament for diagnosing or treating tumor, for chromosome mapping or for tissue

Claim 2; Fig 375; 638pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polypeptides them. The invention also relates to an antibody which specifically binds to a PRO polypeptide a method for stimulating the release of tumour necrosis factor-alpha (TWF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung,

colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as antication probes, in chromosome and gene mapping, in generating antication probes, in chromosome and gene mapping, in generating antication probes, in chromosome and gene mapping, in generating antication probes, in chromosome and special antication generating either transgenic animals or knock-out animals which are used in preparing at manipodies, such as tumours, for stimulating of the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of thuman microvascular endothelial cells, for modulating proliferation of adipocyte cells, for stimulating of proliferation of adipocyte cells, for stimulating the uptake of stimulating of or gene expression in pericyte cells, for stimulating the proliferation of anner ear utricular supporting cells, for stimulating cells, for stimulating endothelial cells for stimulating and condition and for treating various bone and/or cartilage disorders such as sports injuries and cells, for stimulating cells, for stimulating endothelial cells formation and for treating various as sports injuries and and/or cartilage disorders such as sports injuries and conditions which stimulate the release of proceoglycans from cartilage are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobin-associated disorders such as various thalassemias and conditions which sequence encodes a human PRO polypeptide of the invention. Note: The sequence encodes a human PRO polypeptide of the invention. Note: The sequence date for this patent is also available in electronic format from the useful for the useful seconds of the invention.

2003-899787/82. P-PSDB; ADD93062. Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.

Claim 2; SEQ ID NO 375; 636pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also cancisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in casents. The PRO polypeptides by recombinant techniques and in casents. The PRO polypeptides or knock-out animals which are used in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful captument for treating a condition responsive to the polypeptides of antibodies, such as tumours, for stimulating and inhibiting proliferation of or gene expression in perioyte cells, for stimulating cubmulating cubmuses or FRA by skeletal muscle cells, for stimulating cubmusers or proliferation of adipocyte cells, for stimulating cubmusers or proliferation of adipocyte cells, for stimulating cubmusers or proliferation of adipocyte cells, for stimulating cubmusers and colls, for inducing endothelial cells upperformed cells, for reating endothelial cells, for modulating and cubmusers and any articulate and articulates which stimulate the release of proteoglycans arthritis. PRO polypeptides which stimulate the release of proteoglycans

from cartilage are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobinassociated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polynucleotide of the invention. Note: The sequence data for this patent is also available in electronic format from USPIO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                      9
                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                               CACCTTCCCCAAAGCTATGGACAACGTGGACGACCGGCAGGGGAGAGGGCCACCCTCAG

comprising the vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising C PRO (Breed to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PR04993 polypeptide is useful for detecting PRO337 polypeptide is useful for detecting a PR0155 polypeptide, and PR01559 polypeptide is useful for detecting a PR0155 polypeptide, and PR01559 polypeptide is useful for detecting pR0337 polypeptide is useful for detecting a broactive molecule to a cell expressing PR0337 polypeptide. The bioactive molecule to a cell expressing PR04993 polypeptide; pR0752, CC molecule to a cell expressing PR04993 polypeptide; pR0752, CC pR0700 or PR0739 polypeptide; an useful for linking a bioactive molecule to a cell expressing PR04993 polypeptide; and PR01559 polypeptide; continying a bioactive molecule to a cell expressing PR04993 polypeptide; continying a bioactive molecule to a cell expressing PR0377 polypeptide; where the cell expressing PR03725, CC pr040799 polypeptide. PR04993 polypeptide; modulating at least one biological activity of the cell expressing PR0379 polypeptide; modulating the biological activity of the cell expressing PR0359 polypeptide; pr0404993 polypeptide; modulating the biological activity of the cell expressing PR0359 polypeptide; pr0404993 polypeptide or anti-PR04993 polypeptide or anti-PR04993 polypeptide or anti-PR04993 polypeptide; pr0404993 polypeptide or anti-PR04993 polypeptide; pr0404999 polypeptide or anti-PR04999 poly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including pring its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New secreted and transmembrane PRO nucleic acids and polypeptides, useful for stimulating the release of tumor necrosis factor alpha from human blood and stimulating the proliferation of differentiation of chondrocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   KP, Botstein D, Desnoyers L, Eaton DL;

Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various and/or cartilage disorders, e.g. arthritis.

Claim 2; SEQ ID NO 375; 648pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation of differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful medicament for treating a condition responsive to the polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of plucose or FRA by skeletal muscle cells for modulating the uptake of stimulating differentiation of adipocyte cells, for stimulating

te, for stimulating cells or T-lymphocyte and for treating trs injuries and asse of proteoglycans ed joint problems, matchd arthritis. PRO and conditions which infiltration. This in electronic format in electronic format of ther; other; and to Gaps 0;			AACAATATTAGCCTCAC 600

Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.

Claim 2; Fig 375; 636pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TRF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidhey, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as a nice properties are useful in molecular biology, including uses as the bybridisation probes, in chromosome and gene mapping, in generating antibene RNA and DNA and in gene therapy. The polymucleotides may also consistent transgenic animals or knock-out animals which are seeful in the development and screening of therapeutically useful reagents. The RNO polypeptides or antibodies are used in preparing of medicament for treating a creening of therapeutically useful consistent of the proliferation of antibodies, such as tumours, for simulating and inhibiting proliferation of condition responsive to the polypeptides or antibodies, such as tumours, for simulating and inhibiting proliferation of inner ear urricular supporting cells, for stimulating the proliferation of inner ear urricular supporting cells, for stimulating cells, for inducing endothelial cells of administry and related joint problems, arthritis. PRO polypeptides which stimulate the release of proteoglycans (from cartilage are useful for treating sports-related joint problems, arthritis. PRO polypeptides which stimulate the release of proteoglycans (from cartilage defectes, osteoarthitis and rheumacoid arthritis proliferation of an university of associated disorders such as various thalassamias and conditions which stimulations which sequence represents a hu from USPTO at segdata.uspto.gov/sequence.html.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adremal, luig, coll, breast, proseate, rectal, kidney, cervical and liver tumours). The prolymucleotides are useful in molecular biology, in generating and insense RNA and BNA and in game therapy. The polymucleotides may also arisense RNA and BNA and in game therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapourically which are useful in the development and screening of therapourically preparing of medicament for treating a condition responsive to the polypeptides or antibodies are used in preparing of medicament for treating a condition responsive to the polypeptides or antibodies are useful in preparing of for scrimulating differentiation of adprocyce cells, for modulating the uptake of glucose or FPA by skeletal muscle cells or adipocyte cells, for stimulating differentiation of alphocyce cells, for stimulating differentiation of adpocyce cells, for stimulating differentiation of adpocyce cells, for stimulating and cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating cells or treating various bone and/or cartilage disorders such as sports induced and articular cartilage are useful for treating various mammalian hammed local immune system cell infilteration. The sequence represents a human PRO polymucleotide in electronic formet sequence data for this patent is also veful. Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis. Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.

Claim 2; Fig 375; 638pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TMF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adremal, ing the presence of a tumour in a mammal (e.g. adremal, ing) the presence of a tumour in a mammal (e.g. adremal, ing) to colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology in generating thy probables are useful in molecular biology, in generating the proparing PRO polypeptides by recombinant techniques and in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful as tumours, for stimulating of indication of organization of animal microvascular endothelial cells, for modulating the uptake of stimulating differentiation of inner ear utricular supporting of stimulating endothelial cells, for stimulating cells and of inner ear utricular such as sports injuries and articular articular cartilage are useful for treating various mammalian has modolopment of organization that associated joint problems, complete are useful for treating various mammalian has modolopment of sequence and unan PRO polypeptide of the invention. Note: The sequence data for this patent is also organizable of the invention. New isolated, secreted and transmembrane PRO polypeptides and nucleic acids, useful for the diagnosis, prevention and/or treatment of tumors, such as lung, colon, breast, prostate, rectal, cervical and/or liver tumors

Claim 2; Fig 375; 637pp; English

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TMF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adremal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, in generating to polymucleotides are useful in molecular biology, in generating the problem of the properties of the properties are useful in the development and screening of he properties are useful in the development and screening of kencapture of the proliferation of colony peptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies are used in preparing of human microvascular endothelial cells, for modulating the uptake of stimulating differentiation of or gene expression in periory cells, for stimulating of ferentiation of inner ear utricular supporting cells or T-lymphocyte cells, for stimulating the proliferation of inner ear utricular supporting cells or T-lymphocyte cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular such as sports injuries and articular cartilage are useful for treating various mammals and condition. This cells, from chanced local immune system cells of probeglydes are useful for treating various mammals and condition. This sequence encodes a human PRO polypeptide of the invention. Note: The sequence codes a human PRO polypeptide of the invention. The sequence maned or this patent is also escivate an elec

CC A-peptide to factor VIIA, for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour. The oligonoclectide probes are useful for isolating genomic and cDNA nucleotide sequences or antisense probes. (I) is also useful as therapeutic asent. FNO is useful in assays to identify other proteins or molecules involved in binding in assays to identify other proteins or molecules involved in binding or interaction. A polynucleotide (II) encoding (I) is useful in chromosome come mapphing, in generation of antisense RNA and bNA, in the crockout animals which in turn are useful in the development and considered the interapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating corposes. An anti-(I)-antibody is useful in diagnostic assays for PRO, e.g. detecting its expression in specific cells, tissues or serum, and for a fifnity purification of PRO from recombinant cell culture or natural cources. (II) and (II) are useful for tissue typing. This sequence encodes or a novel human secreted and transmembrane PRO polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various and/or cartilage disorders, e.g. arthritis.

Claim 2; Fig 375; 636pp; English

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis of polypeptide, a method for stimulating the prosection or differentiation of chondrocyte cells and a method for proliferation or differentiation of chondrocyte cells and a method for or detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses a hybridisation probes, in chromosome and gene mapping, in generating to polymucleotides may also this service. The PRO bolypeptides or antibodies are used in preparing propagation or knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful as tumours, for stimulating and inhibiting proliferation of madicament for treating a condition responsive to the polypeptides or antibodies are used in preparing a condition responsive to the polypeptides of stimulating differantiation of adipocyte cells, for stimulating of ferentiation of adipocyte cells, for stimulating differantiation of inner ear utricular such as sports injuries and carthritis. PRO collecation of inner ear utricular such as sports injuries and a articular cartilage are useful for treating various mammalian hammoly condition. The proliferation of some calcular ear utricular such as sports injuries and a articular cartilage are useful for treating various mammalian hammoly condition. The sequence data for this patent is also each the invention. Note: the sequence data for this patent is also each time.

The sequence represents a human PRO polymerical and in electronic form the sequence data for this pate

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the prosting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidhey, cervical and a method for proliferation probes, in chromosome and gene mapping, in generating colon, breast, prostate, rectal, kidhey, cervical and liver tumours). The polymucleotides may also hybridisation probes, in chromosome and gene mapping, in generating colon, breast, prospating RN and in gene therapy. The polymucleotides may also a trainesmes RNA and in gene therapy. The polymucleotides may also consecut the PRO polypeptides by recombinant techniques and in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful as tumours, for stimulating and inhibiting proliferation of thuman microvascular endothalal cells, for modulating the uptake of stimulating differentiation of adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating cells or T-lymphocyte cells, for stimulating differentiation of inner ear utricular supporting cells, for stimulating cells or to gene expression in pericyte cells, for stimulating cells or traiting ear useful for treating sports related joint problems, articular cartilage are useful for treating various mammals and condition. This ceptuence date for missed such as various thalassaemias and condition. This ceptuence date for this patent is also exclassed in electronic format from the patent as a human PRO polypeptide of the invention. The patent is also esquence mane of the instruc
                                                                                               3

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the profiteration or differentiation of chondrocyte cells and a method for confidence and presence of a tumour in a mammal (e.g. adremal, lung, cervical and liver tumours). The proliferation probes, in chromosome and gene mapping, in generating antibenses RNA and BNA and in Decellar biology, including uses as hypridisation probes, in chromosome and gene mapping, in generating antibense probe. The proportion of the properties by recombinant techniques and in the development and screening of herapeutically useful a setul in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of therapeutically useful caregomes, such as tumours, for stimulating and inhibiting proliferation of thuman microvascular endothelial cells, for modulating the uptake of glucose or FFA by skeletal muscle cells of adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating of finer ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cells of adipocyte cells, for stimulating and anthritis. PRO polypeptides which stimulate as sports injuries and articular cartilage are useful for treating various mammalian hasmoglobin-associated disorders such as various thalassaemias and condition. Wote: The sequence are sequence data for this patent is also available in electronic format sequence represente a human PRO polymucleotide of the invention. Note: The sequence represente a human PRO polymucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the problemation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridistion probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also antisense RNA and DNA and in gene therapy. The polymucleotides may also consistent that the development and screening of therapeutically useful cragent in the development and screening of therapeutically useful cragents. The RNO polympeptides or antibodies are used in preparing a condition responsive to the polympeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of antibodies or adipocyte cells, for antibodies, such as tumours, for stimulating and inhibiting proliferation of conversely and elected of adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating configuration of or gene expression in paricyte cells, for stimulating configuration of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cells to may propries and/or cartilage disorders such as sports injuries and conditions which articular cartilage defects, offermation and for treating cartivities and conditions which articular cartilage defects, offerwarding sports-related joint problems, articular cartilage defects, offerwarding various mammalian haemoglobin-associated disorders such as various thalassaemias and conditions which may benefit from enhanned for this patent is also evaliable in electronic format cortinal cartilage defects, offerwarding cell informer cell in the may benefit from enhance data for this patent is also evaliable in electronic format cortinal cortinal and condition with a sequence cortinal cortinal cortin

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNP-alpha) from human blood, a method for stimulating the release to the stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also antisense RNA and DNA poptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful consecution in the development and screening of therapeutically useful continuous such as tumours, for stimulating and inhibiting proliferation of conforman microvascular endotherlal cells, for medialement for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation stimulating differentiation of adipocyte cells, for stimulating stimulating differentiation of adipocyte cells, for stimulating proliferation of proliferation in pericyte cells, for stimulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               840
the proliferation of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobinassociated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polymucleotide of the invention. Once: The sequence data for this patent is also available in electronic format from USPTO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                540
                                                                                                                                                                                                                                                                                                                                                                                   120

New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or cancer.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO inchange of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the presence of a tumour in a memmal (e.g. adremal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as thy including uses as the polynucleotides may also attiense RNA and BNA and in gene therapy. The polynucleotides may also attiense RNA and BNA and in gene therapy. The polynucleotides may also be used in preparing PRO polypeptides or knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening or antibodies are used in preparing a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating of inhibiting proliferation of stimulating and inhibiting proliferation of secondary and inhibiting proliferation of secondary and inhibiting proliferation of secondary and inhibiting and the proliferation of secondary and architis. PRO polypeptides which stimulate the release of stimulating various bone and/or cartilage defects, osteoarthritis and rheumatoid cartilage are also useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid cartilage are also useful for treating sports infilteration. This sequence expression to which may benefit from enhanced local immune system cell invention. Note: The sequence dara for this patent is also available in the invention which may benefit drom enhan

nsefnl

New PRO polypeptides and nucleic acids encoding the polypeptides, in gene therapy, chromosome identification, tissue typing, or as hybridization probes in chromosome and gene mapping.

WPI; 2004-008985/01. P-PSDB; ADE21000.

(secreted and transmembrane)

The invention describes an isolated PRO

Claim 2; Fig 125; 308pp;

음 ò

```
The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them.

Cr The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the relase of tumour necrosis factor (TNF) alpha from human colon, for stimulating the proliferation of chondrocyte cells, for stimulating the proliferation of chondrocyte cells, for stimulating the proliferation of chondrocyte cells, for stimulating the proliferation of choracion probes, in chromosome and gene mapping, in generating contisions may be used in the development and screening of therapeutically useful creageness and in generating probes. The PRO polypeptides by recombinant creagents, in gene therapy, in chromosome identification, as chromosome condition which is responsive to the PRO polypeptides, or anti-PRO condition which is responsive to the PRO polypeptides, or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartiage discrete (e.g. arthritis, sports injuries), involving inducing the recombination of chondrocytes. The PRO polypeptides are useful as

New PRO nucleic acid, useful for recombinantly producing a PRO polypeptide and for manufacturing a medicament for diagnosing or treating a tunor.

Claim 2; Fig 375; 638pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The timentain also relates to an antibody which specifically binds to a PRO polypeptide, a method for timulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the release to an antibody a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridiation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also contisense RNA and DNA and in gene therapy. The polymucleotides may also antisense RNA and DNA and in gene therapy. The polymucleotides may also constain the development and screening of therapeutically useful to research the transgenic animals or knock-out animals which are creagents. The ROD polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of of medicament cells or adipocyte cells, for stimulating conflictation of inner eapters or adipocyte cells, for stimulating the uptake of stimulating underlial cells or adipocyte cells, for stimulating cells or of inducing endothelial cells to adipocyte cells, for stimulating cells, for inducing endothelial cell tube formation and for treating cells or arthrities and certaining endothelial cell tube formation and certaining and certaining and cells or adipocyte cells, for inducing endothelial cell tube formation of cells, cel

articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobin-associated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polymucleotide of the invention. Note: The sequence data for this patent is also available in electronic format from USPIO at seqdata.uspto.gov/sequence.html.

transmembrane polypeptides) and the PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypeptides encoding them.

The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour colon tumour, breast tumour, rectal tumour or liver tumour) in a mammal, for simulating the release of tumour necrosis factor (TMF) alpha from human blood, for stimulating the proliferation of or gene conditoryte cells, for stimulating the proliferation of or gene expression in perioyte cells or for stimulating the proliferation of or gene expression in perioyte cells or for stimulating the proliferation of or gene expression in periosy. In chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant cells and probes, in chromosome and gene mapping, in generating cantisense RNA and DNA, in preparing PRO polypeptides by recombinant cells and beed in the development and screening of therapeutically useful creagents, in gene therapy, in chromosome identification, as chromosome markers and in generating probes. The PRO polypeptides or anti-PRO markers and in generating probes. The PRO polypeptides or anti-PRO condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as perioyte-associated tumours and bone and/or cartial generatiation of chondrocytes. The PRO polypeptides are useful as molecular markers for protein electrophoresis, and in tissue typing. This sequence cartes and an electrophoresis, and in tissue typing. The sequence data for this patent can also be obtained in electronic format directly from USPTO at seqdata.uspto.goc/sequence.html. preparing the PRO New secreted and transmembrane PRO polypeptide useful for medicament for treating a condition that is responsive to polypeptide or anti-PRO antibody, e.g. cancer. Claim 2; Fig 125; 308pp; English. medicament

The invention describes an isolated PRO (secreted and transmembrane)

CC polypeptide (I). PRO982, PRO1160, PRO1187 or PRO1329 polypeptide are

cuseful for stimulating the proliferation of or gene expression in

CC cells. PRO357, PRO329, PRO1272 or PRO4405 polypeptide are useful

cells. PRO351, PRO357, PRO325, PRO1155, PRO1366 or PRO4419 polypeptide

CC are useful for stimulating the release of tumour necrosis factor (INF)-

alpha from human blood. PRO982, PRO357, PRO136, PRO1419, PRO1419,

CC PRO134, PRO137, PRO365, PRO105, PRO1083, PRO144, PRO1419, PRO1309,

CC PRO134, PRO134, PRO136, PRO1805, PRO1444, PRO1411, PRO1309,

CC PRO134, PRO136, PRO186, PRO1806, PRO1444, PRO1444, PRO1309,

CC PRO134, PRO136, PRO1806, PRO1009, PRO1474, PRO1911, PRO1309,

CC PRO1376, PRO1376, PRO1409, PRO1474, PRO1911, PRO1309,

CC PRO1376, PRO1384, PRO1409, PRO1474, PRO1916, PRO1567,

CC STIMULATING THE PRO1164, OF PRO10096 polypeptide are useful for

CC STIMULATING THE PRO1164 or PRO1425 polypeptide are useful for

CC CONTROL OF PRO5725, PRO1154, OF PRO1425, PRO1448, PRO4322,

in a test sample of cells taken from the mammal, and a control sample of normal cells of the same cell type, where a higher level of expression the PRO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is ampliant rumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polymucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO229, PRO1272 or PRO4405 polypeptic is useful for treating bone and/or cartilage disorders (e.g., arthritis sport injuries). This sequence encodes a human secreted and transmembran PRO polypeptide.	st Local Similarity 100.0%; Score 1679; DB 1; Length 1679; conservative 100.0%; Pred. New PRO polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, chromosome identification, tissue typing, or as hybridization probes in chromosome and gene mapping.

Claim 2; SEQ ID NO 125; 308pp; English

The invention describes an isolated PRO (secreted and transmembrane)

C polypeptide (1). PRO582, PRO1160, PRO1187 or PRO1329 polypeptide are
c useful for stimulating the proliferation of or gene expression in

CC periotre cells. PRO357, PRO229, PRO1222 or PRO4405 polypeptide are useful

CC calls. PRO311, PRO357, PRO125, PRO1106 or PRO1419 polypeptide

C calls. PRO311, PRO357, PRO1155, PRO1106, PRO1419 polypeptide

C calls. PRO131, PRO357, PRO1357, PRO1316, PRO1419, PRO1416,

Alpha from human blood. PRO922, PRO10106, PRO1419, PRO1419,

The invention describes an isolated PRO (secreted and transmembrane)

CC polypeptide (1). PRO932, PRO1160, PRO1187 or PRO1329 polypeptide are
useful for stimulating the proliferation of or gene expression in

CC cerismulating the proliferation or differentiation of chondrocycle

CC retimulating the proliferation or differentiation of chondrocycle

CC cells. PRO231, PRO225, PRO1155, PRO1155, PRO1196, PRO1119, PRO214,
